

Task 3

`ifconfig` gives you your system network information. Parse out your local IP (192.168.xxx.xxx) address and display it only.

```
$ ./whats_my_ip.sh
```

Example output

```
192.168.18.2
```

Task 4

Modify your PS1 and make it look like

```
[15:52:13] ~ >
```

Where `[15:52:13]` is timestamp, `~` is your present working directory.

Put this in `~/.dotfile` and execute this dot file safely (only if present) through `~/.bashrc`.

Task 5

Box print a string through script

```
$ ./box_print.sh THIS STRING
```

Should print

```
*****
* THIS STRING *
*****
```

Task 6

In last task (Task 5), pass arguments (through flags), like

```
$ ./box_print.sh -s "THIS STRING" -c "+"
```

The above example prints it

```
+++++
+ THIS STRING +
+++++
```

Passing nothing as a character (no `-c`) will only print the string

```
THIS STRING
```
